Our mission is to be able to boost your growing in the global market, so if you want to implement an integrated software for managing your processes and your mobility please, just call us!

We design and develop our solutions base on an intelligent management software that uses a powerful Business Process Management (BPM) engine to automate, monitor, control and optimise anything, from a simple project or the management of a department to the complete integrated management of the entire company or organization.

Business Processes or Intelligent Processes are a collection of related, structured activities that, as a whole, constitute the overall activity of any company or organization. These processes can be managed and controlled by systems known as BPM.

As an example of processes...

Manage purchasing cycles.

Financial management, covering the control of money, loans, credits and debits, optimising investment destinations and cash flow applications.

Integral optimisation of business resources from a global perspective and Design and monitor present and future strategies in all areas of activity .

Manage marketing and demand generation activities. Sales opportunities

Manage sales opportunities, including the control of commercial actions and the automatic generation of orders and contracts as appropriate Manufacturing

Manage manufacturing or transformation processes.

Manage sales cycles, including invoicing, charges and claims and Customer Service. Permanent hot-line for customers.

Manage the provision of services.

Accounting, including the assignation and control of budget allocations. Human Resources

Manage human resources, including: recruitment, salaries and fees, permissions, vacations, redundancies, control and work performance optimisation, etc.

Establish and continuously update performance standards in the organization.

Document Management. Intelligent and integrated management of all documents in the organization via potent File Systems that can handle the creation, modification, search, printing, etc., of millions of documents very quickly.

eCommerce with automatically updated offers, including shopping carts and payment gateways.

CRM and Other processes automating all workflows of the company.
